Education

B.S. Computer Science, Minor in Business May 2026
Arizona State University *GPA: 3.9*

Achievements: WiCS Hackathon Winner, GHC Scholar 2025, New American Scholar ($14,500/year), Dean's List, Codepath.
Relevant Coursework: Data Structures and Algorithms (DSA), Introduction to Software Engineering, Object-Oriented Programming, Introduction to Financial Engineering, Introduction to Artificial Intelligence(AI).
Publications: Liu, H., Li, D., Ukani, H.. "Beyond Accuracy: Rethink Large Language Model-based Feature Selection." ACM SIGKDD Explorations Newsletter, 2026. Under review.

Experience

Software Engineer Intern Sep 2025 – May 2026
Extra Sauce Agency *Remote*

- Shipped an AI powered full-stack content creation platform for **50+** internal users, working with a team of 5 to build a versioned markdown editor with Google Drive and Notion sync.
- Cut content creation time by **60%** by building AI agent pipelines with tool orchestration, plan mode, and RAG.
- Technologies: TypeScript, Next.js, React, Supabase, PostgreSQL

Research Assistant June 2025 – May 2026
Data Mining and Machine Learning Lab *Tempe, AZ*

- Cut LLM feature selection cost by **99%** compared to search-based methods while matching their accuracy, by running and benchmarking a tool-calling agent that uses statistical and feature selection APIs.
- Found the agent ranked first among 6 methods on regression tasks across 8 datasets by benchmarking it against traditional and LLM-based approaches, including robustness and ablation tests.
- Technologies: Python, OpenAI API (GPT-4o), scikit-learn, pandas, NumPy, mrmr-selection, tiktoken, matplotlib

Software Engineer Intern (Contract) Sep 2025 – Nov 2025
Hacker in Heels *Remote*

- Cut manual survey analysis time by **70%** by building an NLP pipeline that tags **5,000+** open-ended responses by theme, sentiment, and skills, with a Streamlit dashboard.
- Raised resource engagement by **35%** by building a recommendation engine using embeddings and LightGBM.
- Technologies: Python, Hugging Face Transformers, BERTopic, spaCy, LightGBM, FastAPI, PostgreSQL (pgvector), Docker

Projects

Akeso | Link Sep 2026 – Present

- An **open-source agent** that repairs broken Python code and SQL queries inside isolated Docker sandboxes, using LLM tool calling to read, edit and test code until the checks pass.
- Includes a tamper-proof 30-task benchmark, run from one CLI command that reports pass rates, traces and cost per task.
- Technologies: Python, Docker, LLM tool calling (Groq/OpenAI-compatible APIs, Anthropic SDK), pytest, SQLite, sqlglot, pydantic, Typer, Rich, Git

Cincin | Link July 2026 – Sep 2026

- An autonomous AI pipeline scraping **600+** Phoenix venues using Playwright, classifying **6+** content patterns, extracting structured happy hour deals via Groq LLM.
- Uses geospatial search, real-time "on now" filtering, and confidence-score gating across **100+** indexed happy hours, lunch specials, and weekday deals.
- Technologies: Next.js, FastAPI, PostgreSQL, PostGIS, Playwright, Groq, MCP, Vercel, Railway

SERA | Link Mar 2025 – May 2026

- **Won** 1st place by building an AI sexual health chatbot with RAG and voice chat in 24 hours, then extended it after the event into a production-ready app with Google OAuth, rate limiting, and CI safety checks.
- Raised retrieval precision from **38% to 90%** and caught **100%** of crisis messages across 40 tests by adding Cohere reranking and a two-layer keyword and LLM safety check.
- Technologies: Node.js, React, MongoDB Atlas Vector Search, Cohere, OpenAI API, ElevenLabs, Tailwind CSS

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, SQL, C/C++, HTML/CSS
Frameworks/Libraries: Spring Boot, React, Node.JS, Next.JS, Flask, JUnit, PostgreSQL, Angular, TensorFlow, PyTorch
AI/ML: OpenAI API, RAG, LLM Agents, Groq, Cohere, spaCy, scikit-learn, pandas, NumPy, matplotlib
Databases: PostgreSQL, PostGIS, MongoDB (Atlas Vector Search), Supabase, MySQL
Tools & Cloud: Git, Docker, AWS, Vercel, Railway, Playwright, Mapbox, ElevenLabs, Postman, Jira
