EDUCATION

B.S. Computer Science, Minor in Business

May 2026

Arizona State University

GPA: 3.9

Relevant Coursework: Data Structures and Algorithms (DSA), Introduction to Software Engineering, Object-Oriented Programming, Introduction to Financial Engineering, Introduction to Artificial Intelligence(AI).

Achievements: WiCS Hackathon Winner, GHC Scholar 2025, New American Scholar (\$14,500/year), Dean's List, Codepath, Women in Computer Science (WiCS), Girls Who Code (GWC), Rewriting the Code (RTC).

TECHNICAL SKILLS

Languages: Javascript, Typescript, Java, Python, C/C++, C, SQL, HTML, CSS, Go, MySQL

Frameworks/Libraries: Spring Boot, React, Node.JS, Next.JS, Flask, JUnit, PostgreSQL, Angular, TensorFlow, PyTorch

Tools: Amazon Web Services (AWS), Postman, Azure, Jira, DynamoDB, MongoDB, Git, PyCharm, Docker, Wordpress

EXPERIENCE

Software Engineering Intern

Sep 2025 – May 2026

Extra Sauce Agency

Remote

- Led a team of 5 engineers to ship a full-stack content creation platform with a versioned markdown editor using **Next.js**, **React**, and **Supabase**.
- Implemented auth, database schema, and integrations with Google Drive and Notion, enabling persistent multi-document editing and AI workflows.
- Designed and implemented AI agent pipelines with tool orchestration, plan mode, and **context-aware retrieval (RAG)**, cutting content creation time by **60%** for **50+** internal users

Research Assistant

June 2025 – May 2026

Data Mining and Machine Learning Lab

Tempe, AZ

- Improved model accuracy by up to **12%** by designing and running **15+** LLM-based feature selection experiments across **8+** benchmark datasets.
- Identified the top 2 highest-performing feature selection agents by benchmarking 3 prompt-based methods using F1 and NMAE scores on classification tasks.

Software Engineering Intern (Contract)

Sep 2025 – Nov 2025

Hacker in Heels

Remote

- Reduced manual survey analysis time by building a **fullstack NLP** application with a **Python/Flask** backend using **spaCy** and **Hugging Face Transformers** to process **1000+** open-ended survey responses.
- Increased participant-to-opportunity match rate by **35%** by engineering a predictive recommendation engine that connected **100+** participants to relevant career resources

PROJECTS

Cincin | Next.js, FastAPI, PostgreSQL/PostGIS, Playwright, Groq | [Link](#)

July 2026 – Sep 2026

- Built an autonomous AI pipeline that scrapes **600+** Phoenix venues using Playwright, detects 4 content patterns (linked pages, PDFs, location-gated nav, inline text), and uses **Groq LLM** with structured JSON extraction and confidence scoring to index happy hours, lunch specials, and weekday deals.
- Formulated geospatial search with **PostGIS ST_DWithin** for sub-100ms radius queries, real-time "on now" deal detection, and a weekly cron refresh, deployed full-stack on **Vercel** + **Railway** with an interactive Mapbox map and address geocoding

FlowDesk | Spring Boot, React, PostgreSQL, Docker

Dec 2025 – Feb 2026

- Created a full-stack IT helpdesk platform with a **Spring Boot REST API** and **React** dashboard, supporting **100+** users with real-time ticket tracking and role-aware automated assignment engine
- Optimized PostgreSQL queries for **500+** concurrent retrievals at **70%** faster response times; secured **15+** endpoints with **JWT** auth and **RBA**

SERA (WiCS hackathon, 1st place) | React, Node.JS, MongoDB, Tailwind CSS | [Link](#)

Mar 2025 – May 2025

- Engineered an AI sexual health chatbot in **24 hours** using **Node.js**, **RAG (Cohere embeddings + MongoDB Atlas Vector Search)** powered by **OpenAI GPT** with **SSE streaming**.
- Integrated **Web Speech API** and ElevenLabs TTS to enable fully voice-driven conversations, allowing users to speak questions and hear responses without touching a keyboard.
- Developed dual-storage session persistence (MongoDB for authenticated users, localStorage for anonymous) with **JWT** auth, **Google OAuth**, and 3-tier rate limiting to protect API keys in production.
